Abstracts

Retarding Field Energy Analyzer is a device used to measure the ion velocity distribution function in plasma. Electrons are shielded by the Debye sheath formed by the slit, so that ions enter the cavity. Under the internal electric field modulation, ions with energy higher than the modulation voltage are collected by the collector. Its measuring range is about 10~100eV, which is widely used in plasma physics research and industrial plasma applications.

The global Retarding Field Energy Analyzer market size was estimated at USD 50.7 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
