Abstracts

Reticle Management Software is a specialized category of enterprise software designed to manage the lifecycle, logistics, and operational usage of photomasks?also known as reticles?within semiconductor manufacturing facilities. It functions as a centralized system to track reticle inventory, usage history, maintenance schedules, cleaning cycles, defect inspection data, and storage conditions, while also providing integration with manufacturing execution systems (MES) and equipment automation interfaces to ensure reticles are available, qualified, and correctly deployed in lithography tools at the required time. By automating workflows, enforcing process controls, and maintaining comprehensive data logs, this software reduces human error, minimizes equipment downtime, prevents misprocessing, extends reticle lifespan, and supports overall fab productivity and yield management.
