Abstracts

Retinal drugs and biologics encompass a class of therapeutics specifically designed to diagnose, treat, or manage diseases affecting the retina, such as age-related macular degeneration (AMD), diabetic retinopathy, retinal vein occlusion, and inherited retinal disorders. These treatments include anti-VEGF (vascular endothelial growth factor) agents, corticosteroids, gene therapies, and small molecule inhibitors, which are administered via intravitreal injections, implants, or systemic delivery to target pathological mechanisms like angiogenesis, inflammation, or genetic mutations. The development of these products involves advanced biologics and precision medicine approaches, aiming to preserve or restore vision by addressing the complex pathophysiology of retinal conditions, often with a focus on improving drug delivery efficacy, reducing treatment frequency, and minimizing side effects.

The global Retinal Drugs And Biologics market size was estimated at USD 12500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
