Abstracts

Retort pouch packaging refers to a flexible, laminated packaging solution specifically engineered to withstand the high-temperature, high-pressure conditions of retort sterilization, a process that renders food products commercially sterile and shelf-stable without refrigeration. Typically constructed from multiple material layers?such as polyester for strength, aluminum foil as a barrier against oxygen and light, and polypropylene for heat-sealability and food contact?these pouches combine the durability of cans or jars with the lightweight, space-efficient, and user-convenient attributes of flexible packaging. Primarily used for ready-to-eat meals, sauces, pet food, baby food, and other thermally processed products, retort pouches offer advantages including reduced transportation costs, faster heating times, improved product quality retention, and lower environmental impact compared to rigid alternatives.
