### Report Overview

Safety syringes are syringes developed with a safety mechanism to prevent needle stick and other injuries. The needle on a safety syringe can be detachable or permanently attached. The emphasis on preventing the re-use of syringes by safety bodies and governments has raised the demand for safety syringes. Syringes with retractable needles and syringes with protective shields are safety syringes widely used in hospitals. Retractable needle – the needle (usually fused to the syringe) is spring-loaded and retracts into the barrel of the syringe when the plunger is comp.
