Abstracts

Report Overview:

Return freight insurance is a kind of freight insurance, which solves the problem of the freight expenses of both parties in the return. It is divided into two categories: return freight insurance (buyer) and return freight insurance (seller). Freight insurance will automatically become invalid after the transaction is successful. In an attempt to encourage consumers to buy products online, many e-sellers buy return-freight insurance (RI) for them (consumers are compensated for return-freight fees after returning products). The type of the e-seller is determined by the selling format that exists between an e-commerce platform and a manufacturer: the reselling format where the manufacturer sells products to the platform, which then sells to consumers, and the agency selling format where the manufacturer sells products to consumers directly through the platform.

The Global Return Freight Insurance Market Size was estimated at USD 2536.32 million in 2023 and is projected to reach USD 6406.63 million by 2029, exhibiting a CAGR of 16.70% during the forecast period.
