Abstracts

Reusable antiviral masks are protective face coverings designed to be worn multiple times while effectively filtering out airborne pathogens, including viruses such as influenza and SARS-CoV-2; these masks typically incorporate advanced materials or coatings?such as copper, silver nanoparticles, or specialized polymers?that actively neutralize or deactivate viruses upon contact, rather than merely blocking them. Unlike disposable masks, they are engineered for durability, washability, and extended use, often featuring replaceable filters and ergonomic designs to enhance comfort and fit, thereby offering a sustainable and cost-effective alternative for both everyday consumer use and specialized settings like healthcare or high-risk environments.
