Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Reusable Cold Chain Gel Pack competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Reusable Cold Chain Gel Pack production reached approximately 12.1 million units, with an average global market price of around US\$ 8 per unit. In 2024, the global single-line production capacity of Reusable Cold Chain Gel Pack will be 800k units. The industry's gross profit margin is 19.8%. The Reusable Cold Chain Gel Pack is a temperature control device based on phase change materials, primarily used to maintain a specific temperature environment in cold chain logistics. Its core is a gel-like refrigerant filled with water, carboxymethyl cellulose, a nucleating agent, and other ingredients. Through phase change processes (such as freeze-thaw), it absorbs or releases large amounts of latent heat, achieving long-term heat preservation. This product is widely used in the transportation and distribution of temperature-sensitive items such as food, pharmaceuticals, and biologics. Its environmentally friendly, energy-saving, low-cost, and convenient use make it an ideal alternative to traditional refrigerants such as dry ice. Global Industry Chain Analysis: By 2024, the global reusable cold chain gel pack industry chain will be clearly defined. Upstream core raw materials will be dominated by international chemical giants, while downstream demand will be driven by leading companies in the food and pharmaceutical industries. On the upstream side, key manufacturers of key materials such as phase change materials (PCM), carboxymethyl cellulose (CMC), and nucleating agents include Ashland (USA), Nouryon (Netherlands), and Dow Chemical (USA). These companies provide high-purity, food- and pharmaceutical-grade raw materials, which determine the gel pack's cooling performance and safety. Midstream, gel pack manufacturing and packaging companies such as Cold Chain Technologies (USA),

Sonoco (USA), and Va-Q-tec (Germany), as well as numerous Chinese manufacturers, are responsible for formula development, production, and global supply. Downstream customers are concentrated in high-value, temperature-sensitive sectors: Food companies like McDonald's, Nestlé, and Unilever rely on it for the delivery of frozen foods and high-end ingredients. Pharmaceuticals and biologics are core markets, with leading global pharmaceutical companies like Pfizer, Roche, and Moderna, as well as logistics giants like McKesson and SF Pharmaceuticals, all heavily adopting it to ensure safe, low-temperature transportation of vaccines, biologics, and diagnostic reagents throughout the supply chain. The entire supply chain is moving towards a more environmentally friendly, time-efficient, and intelligent approach.

The global Reusable Cold Chain Gel Pack market size was estimated at USD 98.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
