The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Reusable Insulin Injection Pen competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of reusable injection pens will reach 118,546 million units, with an average selling price of US\$37.14 per unit. Pen-type injection devices, or pen-type injection devices, combine medication and an injection device into one device, offering key advantages such as precise, quantitative injection, self-medication, safety, and convenience, while avoiding the risk of accidentally breaking a glass syringe. These devices precisely meet the needs of patients with diabetes, weight loss, and other long-term medication needs, and are gradually becoming a mainstream injection solution. Reusable insulin pens consist of a pen and an insulin cartridge. Once the cartridge is depleted, the pen can be replaced with a new one, allowing for repeated use. Reusable pens are a mainstream injection solution for diabetic patients.
