Report Overview

Reverse vending machines (RVMs) are automated systems designed to collect, sort, and process used beverage containers?such as plastic bottles, glass bottles, and aluminum cans?in exchange for incentives like cash refunds, discounts, or charitable donations. These machines utilize advanced technologies, including barcode scanning, optical recognition, and compaction mechanisms, to identify eligible recyclables, separate materials, and prepare them for recycling. RVMs play a critical role in supporting deposit return schemes (DRS) and circular economy initiatives by reducing litter, improving recycling rates, and minimizing landfill waste. Their adoption is driven by environmental regulations, corporate sustainability goals, and consumer demand for convenient recycling solutions, making them a key component in waste management infrastructure globally.
