Abstracts

Radiofrequency (RF) body contouring units are non-invasive medical or aesthetic devices that use controlled radiofrequency energy to heat subcutaneous fat and skin tissue, promoting collagen remodeling, skin tightening, and localized fat reduction through thermal-induced lipolysis and neocollagenesis. These systems typically operate within specific frequency ranges (e.g., 0.3-10 MHz) and may incorporate monopolar, bipolar, or multipolar electrode configurations, along with complementary technologies like vacuum suction, cooling mechanisms, or real-time temperature monitoring to enhance efficacy, patient comfort, and safety. They are primarily used in cosmetic dermatology, plastic surgery clinics, medspas, and wellness centers to address concerns such as cellulite, skin laxity, and stubborn fat deposits in areas like the abdomen, thighs, and arms, offering an alternative to surgical procedures like liposuction.

The global Rf Body Contouring Units market size was estimated at USD 1250.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
