## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on RF Coaxial Power Splitter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of RF coaxial power dividers reached 1,650 k units, with an average selling price of \$780 per unit. RF coaxial power dividers are passive microwave devices primarily used to proportionally distribute input RF signals to multiple output ports, or to combine signals from multiple ports into one signal. They are widely used in communication base stations, radar systems, satellite communications, test and measurement equipment, and 5G/6G wireless networks. These products typically utilize a 50 $\Omega$  coaxial interface and feature wide bandwidth, low insertion loss, high isolation, and strong power-carrying capacity, meeting the demands of high-frequency, high-power applications. With the development of 5G base station construction, satellite internet, millimeter-wave radar, and defense electronics, demand for power dividers continues to rise.

The global RF Coaxial Power Splitter market size was estimated at USD 1287.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
