Abstracts

RF laser is a laser that uses RF excitation technology to drive carbon dioxide gas as the laser medium. The high-frequency electric field is generated by RF signals to excite carbon dioxide molecules to produce light radiation, thereby achieving laser output. This laser usually emits infrared light with a wavelength of 10.6 microns, has high power, excellent beam quality and high energy conversion efficiency, and is widely used in material processing, medical treatment, lidar, gas detection and other fields. Compared with traditional current-driven carbon dioxide lasers, RF lasers have higher stability and more precise output control.

The global RF Laser market size was estimated at USD 1033.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.60% during the forecast period.
