Abstracts

RF Microneedle Skin Tightening Equipment is a non-surgical cosmetic procedure that uses radiofrequency (RF) technology to stimulate the regeneration of skin collagen to achieve skin tightening and lifting effects. Its working principle is to combine microneedles with radiofrequency, and through the mechanical penetration of microneedles, radiofrequency energy is accurately delivered to the deep layers of the skin. This device typically causes minor damage to the skin's surface, stimulating the skin's self-healing mechanisms and promoting collagen regeneration. RF Microneedle Skin Tightening Equipment will further expand in the field of skin rejuvenation treatment in the future. Because the technology does not rely on the absorption of a single pigment, it is suitable for people of all skin tones, which may facilitate its use worldwide.

The global RF Microneedle Skin Tightening Equipment market size was estimated at USD 405.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.30% during the forecast period.
