Report Overview

An RF switch or microwave switch is a device to route high frequency signals through transmission paths. RF (radio frequency) and microwave switches are used extensively in microwave test systems for signal routing between instruments and devices under test (DUT). Incorporating a switch into a switch matrix system enables you to route signals from multiple instruments to single or multiple DUTs. This allows multiple tests to be performed with the same setup, eliminating the need for frequent connects and disconnects. The entire testing process can be automated, increasing the throughput in high-volume production environments.

The global RF and Microwave Switches market size was estimated at USD 3407 million in 2023 and is projected to reach USD 7399.64 million by 2032, exhibiting a CAGR of 9.00% during the forecast period.
