Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on RF Power Supply competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. RF power supply (RF generator) is a power supply with a certain power that can generate a fixed frequency sine wave voltage. Its frequency is within the RF range (about 3KHz to 300GHz). The general power is 0.3 to 15kW, and the frequency is in different ranges such as 2 MHz, 4KHz, 13.56 MHz, 27.12 MHz, 40.68MHz, and 60MHz. High-frequency power supply can be used to generate stable current and voltage to meet the needs of various mechanical equipment. RF power supply mainly consists of 5 parts: DC power supply module, oscillation circuit module, power amplifier module, RF power detection module, and RF interlocking control module. DC power supply module: supplies power to the internal control circuit board of the power supply, including 24V, 15V and other voltages; Oscillator circuit module: is the crystal oscillation part, generating a sine wave signal; Power amplifier module: consists of several solid-state transistors, the main purpose is to amplify the power of high-frequency signals so that the output power meets the output requirements; RF power detection module: mainly detects the control circuit, detects the incident power and reflected power through high-frequency measurement inductance, and provides the signal to the main control board to achieve automatic PID control; RF interlock control module: mainly a switch signal mode, which can provide safety interlocking functions, such as RF output line interlocking, high-voltage interlocking, RF output interlocking, over-temperature interlocking and other control functions.

The global RF Power Supply market size was estimated at USD 2055.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.80% during the

forecast period.
