### Report Overview

Radio frequency (RF) is radio frequency current, which is an abbreviation of high-frequency alternating electromagnetic waves. For wireless communication systems, electromagnetic waves need to be radiated into and received from space. This process is achieved through antennas. The radio frequency electromagnetic wave received directly cannot perform analog-to-digital conversion and subsequent information processing. The function of the radio frequency receiver is to down-convert electromagnetic waves with high frequencies that are easy to transmit to low frequency signals that can be used for information processing.
