Report Overview

RFI (Radio Frequency Interference, radio frequency interference) and EMI (Electromagnetic Interference, electromagnetic interference) shielding material is a material used to reduce or block radio frequency and electromagnetic frequency interference. They are commonly used in applications such as electronic equipment, communication equipment, aerospace equipment, medical equipment, military equipment, etc., to prevent electromagnetic radiation from interfering with the normal operation of other equipment, or to prevent external electromagnetic radiation from interfering with the equipment. RFI and EMI shielding materials are usually made of conductive materials or magnetic materials, which have good electromagnetic shielding performance and can absorb, reflect or conduct electromagnetic waves, thereby reducing or preventing the propagation of interference signals. These shielding materials can exist in different forms, such as films, coatings, embedded materials, impedance matching layers, etc. They can be used on equipment casings, cables, connectors, circuit boards and other components to effectively reduce or eliminate the effects of electromagnetic interference.
