Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on RFID Dry Inlay competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. RFID dry inlays refer to the core module of RFID electronic tags without an adhesive layer. The chip and antenna are directly connected and fixed to the substrate. Their structure is simplified, requiring external encapsulation or specific mounting methods for application on object surfaces. They are suitable for automated integration scenarios with special requirements for thickness, flexibility, or subsequent processing. Upstream suppliers include chip design and manufacturing, antenna materials (such as aluminum foil/etched copper), and substrates (PET/paper, etc.). Downstream suppliers cater to system integrators, encapsulating dry inlays into various tags for final application in retail, logistics, healthcare, asset management, and other fields. In 2024, the global RFID dry inlay market had a unit price of \$530 per thousand units, with sales of approximately 1.85 billion units and global production capacity of 2-2.5 billion units. The industry profit margin was 25-30%.

The global RFID Dry Inlay market size was estimated at USD 981.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
