Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on RFID Etching Antenna competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of RFID Etching Antennas will reach 75 billion pieces, with an average selling price of US\$0.021 per piece. RFID tag antennas can be broadly categorized into the following categories, depending on their conductor material, material structure, and manufacturing process: etched antennas, printed antennas, wound antennas, additive antennas, ceramic antennas, and fragile etched anti-transfer antennas. Etched antennas, typically made of copper or aluminum, are the mainstream manufacturing process for RFID antennas, boasting the highest market share and the most mature technology. Etched antennas can be further categorized into traditional etching and precision etching. Based on material, they can be divided into PET antennas, PI (polyimide) antennas, and PCB antennas. The etching method is suitable for mass production of 13.56MHz and UHF RFID tags, offering advantages such as fine circuitry, low resistivity, excellent weather resistance, and stable signals. However, this method also has significant disadvantages, including a complex production process and low production capacity. The downstream industry chain for etched RFID antennas encompasses various end-user applications. These applications primarily focus on ultra-high frequency (UHF) RFID technology, with terminals primarily used in footwear and apparel, supermarket retail, library and archives, and logistics, primarily in footwear and apparel and commerce. These include brands like Walmart, ZARA, Uniqlo, Decathlon, and Nike. Applications in the logistics industry include Cainiao Logistics and China Postal Express & Logistics.

The global RFID Etching Antenna market size was estimated at USD 1575.0 million in

2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
