Abstracts

An RFID reader, also known as an interrogator, is a device that provides the connection between the tag data and the enterprise system software that needs the information. The reader communicates with tags that are within its field of operation, performing any number of tasks including simple continuous inventorying, filtering (searching for tags that meet certain criteria), writing (or encoding) to select tags, etc. The reader uses an attached antenna to capture data from tags. It then passes the data to a computer for processing. Just like RFID tags, there are many different sizes and types of RFID readers. Readers can be affixed in a stationary position in a store or factory, or integrated into a mobile device such as a portable, handheld scanner. In this report, we focus on the handheld type RFID reader. In the global RFID handheld reader market, the main companies are Zebra, Honeywell, Sense Technology and Invengo Technology. The top 2 companies hold a share about 50%. The main regions are North America and China, with a market share close to 65%. UHF RFID Handheld Reader has the largest market share in the RFID handheld reader segment, close to 70%. The application scenarios of RFID handheld readers are mainly concentrated in transportation and logistics, with a market share of close to 37%.
