## Abstracts

The radio frequency identification (RFID) parking management system is an intelligent system that uses radio frequency identification technology to automatically manage the entry and exit and parking process of parking lots. The system automatically recognizes, records and manages the identity of vehicles by installing RFID tags on vehicles and setting up readers and writers at the entrance, exit and inside the parking lot, so that vehicles can pass quickly and billing operations can be completed without human intervention. The RFID parking management system improves the operational efficiency of parking lots, reduces waiting time in queues, and enhances security and user experience. In addition, it also supports data synchronization with the background system, which facilitates real-time monitoring and data analysis, and optimizes the allocation of parking resources.

The global RFID Parking Management System market size was estimated at USD 672.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
