Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on RFID Temperature Tags competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of RFID temperature tags is 244.4 million units, with an average selling price of US\$4.5 per unit. RFID temperature tags are smart label devices that integrate Radio Frequency Identification (RFI) technology with temperature sensors. They are primarily used to monitor and record ambient temperature data in real time during transportation, storage, or use. The tags communicate with a reader/writer via wireless radio frequency, transmitting the collected temperature information to backend systems, enabling remote reading, tracking, and analysis of temperature data. Some high-performance tags support a wide temperature range of -40°C to +220°C and feature high-precision sensors (such as PT100), programmable data collection intervals, power-saving modes, and resistance to high-temperature sterilization. They are widely used in cold chain logistics, medical transportation, and machinery monitoring, ensuring the quality, safety, and compliance of temperature-sensitive items throughout the entire process. The upstream and downstream supply chain for RFID temperature tags encompasses a complete ecosystem, from core components to end applications. The upstream sector comprises sensor manufacturers (such as STMicroelectronics and TI), communication module suppliers (such as Quectel and u-blox), battery and power module vendors (such as Murata and VARTA), and embedded system developers (such as Advantech and Kontron), providing the hardware foundation and technical support required for the tags. The downstream sector connects cold chain logistics service providers (such as DHL Cold Chain, UPS Healthcare, and SF Express Cold Logistics), pharmaceutical companies (such as Pfizer, Novartis, and Sinopharm), food processing companies (such as Nestlé, Tyson, and

Danone), e-commerce platforms (such as JD Cold Chain, Amazon Fresh, and Hema Fresh), and regulatory agencies (such as the FDA, EMA, WHO, and GMP certification bodies), jointly promoting the compliant collection of temperature control data, quality assurance, and full-chain traceability management.

The global RFID Temperature Tags market size was estimated at USD 1100.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
