Report Overview

Rheumatoid arthritis stem cell therapy has been demonstrated to induce profound healing activity, halt arthritic conditions, and in many cases, reverse and regenerate joint tissue. Today, bone marrow transplant, adipose or fat-derived stem cells, and allogeneic mesenchymal stem cells (human umbilical cord tissue) are used for rheumatoid arthritis stem cell therapy. As the rheumatoid arthritis worsens, the body initiates autoimmune response and attacks the cells. Rheumatoid arthritis stem cell therapy is growing in popularity across hospitals, ambulatory surgical centers, and specialty clinics, as it increases the healing of joints and further treats the entire system that causes the joint pain and inflammation.

The global Rheumatoid Arthritis Stem Cell Therapy market size was estimated at USD 125.42 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
