## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rhizoma Picrorhiza Extract competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Picrorhiza rhizome extract is a complex of active ingredients extracted from the dried rhizome of *Picrorhiza scrophulariiflora* Pennell, a plant of the Scrophulariaceae family. These ingredients primarily include iridoid glycosides (such as picrosides I, II, and III), phenylethanoid glycosides, and cryptotanshinone. This plant is native to the Himalayas, including India, Nepal, Tibet, and Pakistan. Traditional Chinese Medicine uses it to treat jaundice, dysentery, epilepsy, hemorrhoids, and other conditions. Modern pharmacological research has confirmed its multiple biological activities, including antioxidant, anti-inflammatory, immunomodulatory, antiviral, hypoglycemic, hepatoprotective, and anti-allergic properties. Its mechanism of action involves the regulation of signaling pathways such as NF- $\kappa$ B, NLRP3 inflammasome, and miR-26a-5p. It has demonstrated significant therapeutic efficacy in disease models of diabetes, liver injury, rheumatoid arthritis, and bronchial obstruction. The Picrorhizoma Coptidis extract industry has a clear upstream and downstream structure. The upstream sector relies on wild or cultivated rhizome resources, along with ethanol/water extraction equipment and chromatography purification systems. The downstream sector encompasses traditional Chinese medicine companies, functional food brands, cosmetics OEMs, and research institutions. Future development trends focus on the development of high-purity, standardized extracts to meet drug registration and international regulatory requirements, while also promoting cultivated extracts instead of wild collection to alleviate ecological pressure. Products will increasingly be used in combination with multi-target drug combinations to expand into the treatment of chronic diseases such as diabetes and liver disease. Cross-border e-commerce channels will

also be leveraged to accelerate the export of functional foods, particularly to meet high-end demand in the European and American markets. Picrorhizoma Coptidis extract production primarily consists of food-grade powders and pharmacopoeia-grade, high-purity forms. The former is priced at approximately \$45-\$120/kg, while the latter is priced at \$150-\$350/kg. A typical production line has an annual production capacity of 3-10 tons, depending on the extraction process and level of automation. Overall gross profit margins remain in the 40%-65% range.

The global Rhizoma-Picrorhiza-Extract market size was estimated at USD 355.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.00% during the forecast period.
