## Abstracts

Ribavirin spray is a drug spray device used for local treatment. It contains the active ingredient ribavirin, which is a broad-spectrum antiviral drug that can inhibit a variety of viral infections. The spray is easy to use and acts directly on the affected area by spraying, which quickly penetrates and increases the local drug concentration while avoiding the side effects that may be caused by systemic medication. The advantage of ribavirin spray is that it can not only quickly relieve symptoms and reduce viral replication and transmission, but also reduce the burden of drugs on the liver and kidneys. It is especially suitable for situations where local high-concentration drug treatment is required. Its precise targeted treatment characteristics make ribavirin spray an efficient, safe and convenient treatment method.
