Abstracts

Rice husk silica for tyre is a specialized silica derived from rice husk ash, a byproduct of rice milling, and is specifically engineered for use as a reinforcing filler in tyre manufacturing, where it enhances properties such as rolling resistance, wet grip, and durability by improving the interaction between silica and rubber compounds in the tread. This sustainable and high-performance alternative to conventional silica sources, like sand-derived silica, leverages the unique amorphous structure and high surface area of rice husk ash to meet the growing demand for eco-friendly materials in the tyre industry, particularly as manufacturers seek to comply with environmental regulations and reduce carbon footprints without compromising on tyre performance and safety standards.
