Abstracts

Ride Matching and Rewards Software refers to a digital platform or system designed to facilitate and incentivize carpooling or ride-sharing. It helps match individuals with similar travel routes and schedules, making it easier for them to share rides, reducing traffic and environmental impact. The software typically uses location-based algorithms to find optimal matches and provides features such as tracking rides, calculating cost-sharing, and ensuring safety. Additionally, it incorporates a rewards system that motivates users by offering points, discounts, or other incentives for participating in ride-sharing, promoting sustainable transportation habits. Ride matching and rewards software is being pulled into the broader Transportation Demand Management (TDM) and Mobility-as-a-Service (MaaS) wave, where employers, cities and TDM agencies use digital platforms to match carpools/vanpools, log trips and administer financial or gamified incentives that shift commuters away from single-occupancy vehicles, supported by growing evidence that commuter benefits and individual incentives can significantly reduce VMT and increase transit and shared-mode use. Opportunities are strong as more organizations seek software that can centralize commute programs, integrate multimodal trip planning and ridematching, and run automated rewards, challenges and recognition. At the same time, providers face challenges including dependence on employer and public-sector TDM budgets, the need to prove measurable mode-shift and ROI in competitive HR/benefits and MaaS markets, integration complexity with HR, payroll and mobility systems, and equity concerns highlighted in MaaS research, which warns that tech-centric solutions can reinforce existing transport inequalities unless incentive design and access are carefully managed.

The global Ride Matching and Rewards Software market size was estimated at USD 261.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 5.70% during the forecast period.
