Riffle Type Divider is a device used to divide granular samples (such as seeds and grains) into multiple equal portions. It uses a series of intersecting, oppositely oriented slides to divide the poured sample into two equal portions. It is simple in construction, practical, and has low partitioning error. This type of sampler is widely used in agriculture, laboratories, and quality inspection for mixing and partitioning various granular samples. Upstream raw materials mainly include metal materials constituting the main body of the device, plastic or nylon used to manufacture the partitioning grids, and a small amount of seals and fasteners.
