Abstracts

A ring and angle roll bender is a specialized industrial machine used to bend metal profiles?such as rings, angles, channels, beams, and flat bars?into curved or circular shapes with precise control over diameter, radius, and arc. It operates using a set of adjustable rollers arranged in a triangular or pyramidal configuration, which apply gradual pressure to deform the material along its length without compromising structural integrity. These machines are essential in sectors requiring custom-fabricated curved metal components, such as construction, shipbuilding, energy infrastructure, and heavy equipment manufacturing, where they enable the production of everything from support hoops and flanges to architectural elements and pipeline fittings with high repeatability and minimal material waste.
