Report Overview:

A ring-torsion load cell is a type of load cell that measures weight or force by detecting the torsional deformation of a ring. The ring is made of a material with a high modulus of elasticity, such as steel or aluminum. When a load is applied to the ring, it twists slightly. This twist is detected by strain gauges or other sensors, which generate an electrical signal that is proportional to the load.

The Global Ring-torsion Load Cell Market Size was estimated at USD 794.67 million in 2023 and is projected to reach USD 1064.93 million by 2029, exhibiting a CAGR of 5.00% during the forecast period.
