## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ring-type Spinning Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The Ring-type Spinning Machine is a key textile equipment used to further draft, twist, and wind roving into yarn, and is the core component of the ring spinning process. This equipment uses a drafting system to uniformly elongate the fiber sliver, and then utilizes the synergistic action of the spindle, ring, and traveler to achieve high-speed twisting, ultimately winding the formed yarn onto bobbins. Ring spinning machines offer advantages such as high yarn quality, wide applicability to raw materials, and a compact yarn structure, making them suitable for the production of cotton, wool, linen, synthetic fibers, and their blends. They are widely used in textiles, apparel, home textiles, and industrial fiber products, and are an important piece of equipment combining traditional spinning with modern intelligent manufacturing. In 2024, sales reached 13,000 units, with an average price of US\$90,000 and a single-line capacity of 1,000 units.<sup>1</sup>

**By Product Type**

**By Spinning Object:** Cotton Ring Spinning Machines: Suitable for cotton and its blended yarns, the most widely used. Wool Ring Spinning Machines: Used for pure wool or blended wool yarn production, with anti-tangling function. Chemical Fiber Ring Spinning Machines: Designed specifically for long fibers such as polyester and acrylic, with high draft ratio and electrostatic control.

**By Automation Level:**

**Standard Type:** Operation relies on manual bobbin changing and doffing, low cost. **Semi-automatic Type:** Equipped with partially automatic doffing and yarn breakage detection functions. **Fully Automatic Intelligent Type:** Integrates automatic doffing, yarn breakage self-repair, tension control, and data monitoring systems, suitable for intelligent spinning factories.

**By Yarn Type:** **Carded Yarn Machines:** Used for general quality cotton yarn production. **Combed Yarn Machines:** Suitable for high-count, high-quality combed

cotton yarn production. Compact Spinning Machines: Improve yarn strength and smoothness through airflow or mechanical compression systems.

## 2. Upstream and Downstream Analysis

**Upstream:** Includes manufacturers of textile machinery bearings, spindles, aprons, rings, servo motors, transmission systems, and automatic control modules. Key technologies are concentrated in high-speed, stable drive systems and low-vibration precision components. **Midstream:** This involves textile machinery manufacturers and intelligent equipment integrators, responsible for overall machine design, assembly, and digital control system development. **Downstream:** Primarily targeting textile mills, apparel companies, and industrial fiber manufacturers; typical applications include cotton spinning, blended spinning, chemical fiber spinning, wool spinning, and specialty yarn production.

## 3. Technology Trends and Innovation Directions

**Intelligent and Digital Upgrades:** Introducing PLC control, the Internet of Things (IoT), and AI algorithms to achieve production monitoring, yarn breakage prediction, and energy consumption optimization. **Energy Saving and High-Efficiency Drives:** Employing frequency conversion control and low-friction transmission technology to reduce energy consumption by 10-15%. **Compact Spinning and Cleanroom Design:** Improving yarn quality and the working environment through enhanced suction and sealing structures. **Modular and Flexible Manufacturing:** Supporting rapid changeover and scalable spindle designs to meet the needs of small-batch, multi-variety production. **Green and Environmentally Friendly Material Applications:** Introducing lightweight alloys and renewable materials into the frame and transmission components to reduce carbon emissions.
