Abstracts

Ripeness indicator labels are intelligent packaging components designed to provide consumers with real-time, visual information about the freshness or ripeness of perishable goods, primarily fruits and vegetables. These labels typically incorporate time-temperature indicators or chemical sensors that react to specific volatile organic compounds released during the ripening process, such as ethylene gas. By changing color—often through a colorimetric system from one hue to another—the label offers a non-invasive, user-friendly method to assess produce quality without physical handling. This technology aims to reduce food waste by helping consumers and retailers make informed decisions, extending from supply chain management to point-of-purchase and in-home use.

The global Ripeness Indicator Label market size was estimated at USD 25.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
