Report Overview

RISC-V-based SoCs (System-on-Chips) are integrated circuits that utilize the RISC-V open-standard instruction set architecture (ISA) to combine multiple components, such as processors, memory, and peripherals, into a single chip. Unlike proprietary ISAs like ARM or x86, RISC-V is license-free and modular, allowing customization for various applications, from embedded systems to high-performance computing. The architecture's open nature fosters innovation, reduces development costs, and enables scalability across industries, including IoT, automotive, AI, and edge computing. RISC-V SoCs are gaining traction due to their flexibility, energy efficiency, and growing ecosystem support from major semiconductor players, startups, and academic institutions. As geopolitical tensions and supply chain concerns drive demand for alternatives to dominant architectures, RISC-V-based SoCs are emerging as a competitive solution, particularly in markets prioritizing sovereignty, customization, and cost efficiency.

The global Risc V Based Socs market size was estimated at USD 169.39 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 25.00% during the forecast period.
