## Abstracts

The need for operators to optimise or decommission wells is traditionally an expensive process, with RLWI, access to the well is gain without the aid of a riser and expensive semi-submersible drill rig, instead a more cost effective DP mono-hull intervention vessel can be utilised. There is also a time saving associated with this type of operation as mobilisation operations are reduced. Riserless well intervention is becoming ever more popular because of the time savings and cost savings of up to 60% over the traditional drill rig intervention with a standard riser. RLWI based on wireline operations and tasks that can be performed are well logging, gauging, plug setting & removal, perforation operations, well maintenance and well decommissioning. Oceaneering International' interchangeable riserless intervention system (IRIS) and the Blue Ocean riserless intervention system (BORIS) are designed to perform reliably in depths to 10,000 ft (3,000 m) and pressures to 10,000 psi.

The global Riserless Light Well Intervention Rlwi market size was estimated at USD 87.11 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
