Abstracts

Rising Stem Ball Valve (RSBV) is a ball valve that controls the rotation of the ball by the lifting and lowering movement of the valve stem. The main feature of this design is that the valve stem does not rotate during operation, but drives the ball to rotate 90 degrees through linear lifting to open and close the valve. This structural design reduces the friction between the valve stem and the packing, reduces the operating torque, and improves the sealing performance and service life.

The global Rising Stem Ball Valves (RSBVs) market size was estimated at USD 1261.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.
