Report Overview:

RNA biopesticides, also known as nucleic acid biopesticides and nucleic acid interferons, use RNAi technology to silence the expression of important genes in the growth and development of harmful organisms, resulting in growth and development disorders or death, thereby reducing the damage of harmful organisms to crops, and achieving pest control. The purpose of crop safety production. There are two main application methods of RNAi technology in the control of agricultural diseases and insect pests. One is the plant-derived protective agent mainly based on genetically modified crops, and the second is to directly make dsRNA into a spray, and use the spraying method to control pests, that is, non- Plant-derived protective agents.
