## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Road Handlebars competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Road Handlebars production reached approximately 7723.93 K Units, with an average global market price of around 101.57 per Unit. Road handlebars are the steering and control component of a road bicycle, designed to provide riders with efficient, comfortable, and aerodynamic hand positions for riding on paved roads. They are most commonly recognized in the form of drop handlebars, which curve forward and downward, allowing multiple grip positions that support climbing, sprinting, and long-distance endurance riding. Road handlebars are engineered to balance aerodynamics, control, and ergonomics, enabling riders to maintain a streamlined posture while still having precise steering response. They are typically made from aluminum or carbon fiber, and may include integrated features such as internal cable routing, ergonomic shaping, and compatibility with modern brake/shift lever systems. The core raw materials for road handlebars are mainly carbon fiber and aluminum alloys. Typical suppliers include Toray, MCCFC, Teijin, Hexcel, Hyosung Advanced Materials, and SGL Carbon. Road handlebar sales channels are primarily online and offline, with typical online platforms including Amazon, eBay, Alibaba, and JD.com. The single-line production capacity of road handlebars is significantly affected by material selection, manufacturing processes, and automation levels. Large-scale production lines typically have an annual capacity of 30,000 to 100,000 units. The gross profit margin for road handlebars ranges from 20% to 30%.

The global Road Handlebars market size was estimated at USD 785.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the

forecast period.
