Abstracts

Road marking removal service is a professional service performed by professional service providers to remove or update old road markings in traffic areas such as roads, parking lots, airports, etc. Over time, markings may become unclear or no longer applicable due to wear and tear of vehicles, natural aging, repeated painting or other reasons. Road marking removal service removes old markings by physical or chemical methods, and then makes necessary repairs or re-markings to restore the clarity and compliance of the road surface. This service is essential to ensure road safety, improve traffic efficiency and maintain the clean appearance of roads. The upstream of the road marking removal service industry chain mainly relies on core components such as high-pressure pumps, nozzle systems, heating modules, and grinding heads, as well as environmentally friendly adsorption materials and wastewater treatment systems to ensure construction efficiency and environmental compliance. Downstream applications are widely used in government transportation projects, airport operators, real estate developers, and industrial parks to meet the needs of road renovation and marking updates. Future development trends will focus on the widespread adoption of automated robotic removal systems, integration with GIS mapping systems for precise location-based removal, compliance with environmental regulations to promote low-emission equipment upgrades, and the integration of multi-functional equipment to achieve integrated operations for marking removal and repainting.

The global Road Marking Removal Services market size was estimated at USD 882.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
