Abstracts

Road Usage Charging Solution refers to a system that charges drivers based on the distance they travel on roads, rather than traditional methods such as fuel taxes or tolls. This solution aims to provide a fair and equitable way to fund road maintenance and infrastructure projects, as well as reduce congestion and emissions by encouraging more efficient use of roadways. By implementing a road usage charging system, governments can better manage traffic flow, reduce wear and tear on roads, and incentivize drivers to choose alternative modes of transportation. Road Usage Charging Solution are moving from niche pilots to a mainstream option for road-funding and congestion management, driven by accelerating EV adoption, more fuel-efficient ICE vehicles, and the resulting erosion of fuel-tax revenues that traditionally paid for roads. Governments in North America, Europe and parts of Asia-Pacific are experimenting with distance-based RUC and congestion pricing using technologies like DSRC, GNSS and ANPR to replace or complement fuel taxes and tolls, with EU policy already pushing over half of truck freight onto distance-based charging by 2027 and millions of GNSS-based RUC on-board units deployed worldwide. This creates strong opportunities for solution providers that can deliver interoperable, cloud-based charging platforms, integrate with broader advanced transportation pricing systems, and offer analytics that support dynamic, fair pricing across urban roads, highways, and bridges. At the same time, the industry faces significant challenges: political and public resistance to new road taxes, privacy concerns over location and mileage data, complex policy and legal debates over which level of government can levy RUC (as seen in recent EV-focused proposals and court rulings), plus the need to maintain user trust by clearly linking road-usage fees to visible infrastructure benefits while ensuring equity for rural and low-income drivers.

The global Road Usage Charging Solution market size was estimated at USD 2041.0

million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
