Abstracts

Robot refurbishment service is a series of professional services for comprehensive overhaul, replacement of key components, system upgrade and appearance beautification of old, damaged or functionally degraded robots. Increased global economic uncertainty has put pressure on businesses to reduce costs. Refurbished robots can increase productivity with less investment and offer a higher return on investment. The increasingly standardized and modular design and manufacturing of modern robots makes the inspection, repair, and replacement of core components (such as reducers and servo motors) more feasible and reliable. Advanced sensors and diagnostic software can more accurately assess the remaining lifespan and performance status of used robots, providing technical assurance for refurbishment quality and reducing buyer risk. During periods of global supply chain strain, the delivery cycle for new robots can be as long as months or even a year. Refurbished robots are usually readily available or have extremely short delivery cycles, quickly meeting businesses' urgent automation needs. The maturing independent market for parts remanufacturing and distribution provides a stable and reliable source of parts for refurbishment services.

The global Robot Refurbishment Service market size was estimated at USD 3895.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
