Abstracts

Robot special cables are high - performance cables specifically designed and manufactured for robots. Robots' joints and arms constantly bend and twist during movement. Therefore, these cables must have excellent flexibility to adapt to such complex motions and avoid breakage or damage due to frequent bending. Besides, as friction may occur between the robot's moving parts, the cables need to have good abrasion resistance to prevent the outer sheath from wearing out and exposing the internal conductors, which could affect the cable's performance and safety.

The global Robot Special Cables market size was estimated at USD 918.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
