Report Overview

Robotic Automated Fiber Placement (AFP) is an advanced manufacturing process used in the aerospace, automotive, and other high-performance industries to create composite structures. In AFP, a robot precisely places layers of fiber-reinforced materials, such as carbon fiber, onto a mold or tool. These fibers are laid down in a specific pattern to achieve the desired strength and weight characteristics. The process is automated, allowing for greater precision, consistency, and speed compared to manual methods. AFP is particularly valuable for creating complex, large-scale composite parts, such as aircraft wings, with high strength-to-weight ratios.
