Abstracts

A robotic street washer is an automated cleaning device designed to clean and maintain streets and other public areas. It is equipped with advanced sensors, such as laser rangefinders and cameras, which enable it to perceive the surrounding environment, identify obstacles and navigate autonomously. Powered by electricity or other energy sources, it is integrated with various cleaning components including brushes, water pumps and spray nozzles. During operation, the robotic street washer can spray water to moisten the road surface and then use the brushes to scrub away dirt and debris. The dirt-laden water is sucked up by a suction device and filtered for recycling or proper disposal. Some advanced models also have intelligent scheduling and monitoring functions, which can be remotely controlled or managed through a central control system, enabling efficient and precise cleaning of streets with reduced labor costs and improved cleaning quality and efficiency.

The global Robotic Street Washer market size was estimated at USD 742.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
