Abstracts

Robotic welding is the use of mechanized programmable tools (robots), which completely automate a welding process by both performing the weld and handling the part. Processes such as gas metal arc welding, while often automated, are not necessarily equivalent to robot welding, since a human operator sometimes prepares the materials to be welded. Robot welding is commonly used for resistance spot welding and arc welding in high production applications, such as the automotive industry.

The global Robotic Welding market size was estimated at USD 8885.1 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.12% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Robotic Welding market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights. It examines market size, competitive landscape, emerging development trends, niche segments, key drivers and challenges, as well as conducts SWOT and value chain analyses.
