Report Overview

Harmonic Drive is a compact, high performance, precision reduction gear. It is one of the key components used in robotic products such as collaborative work robots. The gear consists of only 3 basic parts (Wave Generator, Flex spline, and Circular Spline). It provides excellent features not found in other speed reducers.

From a global perspective, Japan currently holds the core technology of harmonic drive reducers and forms a technical barrier to high-performance reducers. It is difficult for companies in other regions to reach their technical level. In China, the number of companies producing harmonic drive is about ten or so, and most of them are not scaled up. They are only satisfied with the needs of the low-end market and have a small scale, and they are positioned as low-end product markets. In the United States, Canada, and South Korea also have RandD and production companies.
