## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Rockfall Net competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Rockfall Net production reached approximately 205.82 Million Sqm, with an average global market price of around US\$ 2.95 per Sqm. Rockfall Net is a flexible slope protection system based on a high-strength metal mesh structure. It is primarily used in mountainous highways, railways, tunnel entrances, and slope engineering. It protects below facilities and personnel by intercepting, encasing, and dissipating the impact energy of falling rocks. Its core components include wire rope netting, ring netting, support ropes, pressure-reducing rings, and anchor bolts. Utilizing the ductility and structural integrity of the metal material, it distributes concentrated loads throughout the system and anchoring foundations through localized deformation upon impact. Compared to traditional rigid retaining walls, it offers significant advantages such as strong terrain adaptability, high impact resistance, convenient construction, and minimal environmental impact. This system has been standardized into a product system and can be modularly designed according to protection levels and terrain conditions, making it an indispensable engineering technology in the field of geological disaster prevention and control. The cost structure of the Rockfall Net industry mainly consists of raw materials (high-strength steel wire, zinc-aluminum alloy coating) accounting for approximately 60%, production energy consumption and depreciation accounting for 20%, and R&D and certification expenses. Its gross profit margin is significantly affected by fluctuations in raw material prices. Large-scale production enterprises can maintain a gross profit margin of 25%-35% through automated processes, while companies with advanced anti-corrosion technology and international certifications can achieve gross profit margins exceeding 40% in specialized projects. The core of the industry's

profitability lies in controlling raw material costs, improving process efficiency, and increasing the proportion of high value-added products. In 2024, Rockfall Net's global supply chain exhibited close upstream and downstream collaboration. The core upstream segment was dominated by large steel companies such as Bekaert and POSCO, providing the base materials of high-carbon steel wire and stainless steel wire that determine product strength. These, combined with zinc-aluminum alloy coatings to enhance corrosion resistance and polymer-based plastic coatings such as PVC to improve durability in specific environments, formed the cornerstone of quality. Downstream demand primarily came from two sectors: first, global transportation infrastructure construction, with transportation management departments and large engineering contractors in various countries making bulk purchases for mountain roads, railway slopes, and tunnel entrances; and second, the mining sector, where international mining groups such as Rio Tinto and BHP Billiton widely applied it to mine slope stabilization and rockfall interception. The supply chain clearly demonstrates the value transfer from key material innovation to major engineering applications. Rockfall Net's global market exhibits significant regional characteristics. In mature markets such as North America and Europe, demand primarily stems from the maintenance and upgrading of aging infrastructure, demanding stringent requirements for product durability, environmental standards, and certification systems. The Asia-Pacific region, particularly driven by China's Belt and Road Initiative and Southeast Asian infrastructure development, has become the world's largest growth market, but it is highly competitive and price-sensitive. The Middle East and Latin America markets are strongly correlated with mining and energy project investments, resulting in greater volatility. Within the global supply chain, Chinese companies, leveraging their advantages in raw materials and manufacturing costs, have become major suppliers. However, the high-end market remains dominated by European brands from Switzerland and Austria, who occupy high-value-added segments due to their technological accumulation and brand premium. Differences in terrain, climate, and regulations across regions are driving product development towards customized and localized solutions.

The global Rockfall Net market size was estimated at USD 607.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
