## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Roll-formed Steel ?Battery Enclosure competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global XXXX production reached approximately 1,146.9 K Units, with an average global market price of around US\$ 128 per unit, the gross profit margin range is 10%-25%. Battery Enclosure refers to a shell or container structure used to hold a battery pack, also known as a "Battery Enclosure", "battery box", etc. Its design mainly considers functions such as protecting the battery pack, providing support and connection, heat dissipation, and convenient installation and maintenance. The battery box box is usually used to wrap the battery to ensure the safe operation of the battery pack and provide appropriate environmental and structural support. Roll-formed Steel Battery Enclosure is a metal enclosure structure manufactured by a continuous roll forming process, designed specifically for electric vehicle power battery systems. It uses high-strength steel or aluminum alloy strips, and is formed by multi-pass roller progressive bending to form a box component with a specific cross-sectional shape. It has the characteristics of lightweight, high strength and modular integration, and is the core carrier of battery pack structural safety and thermal management. With the increasingly severe global climate problems and the continuous improvement of environmental awareness, electric vehicles, as a low-carbon and environmentally friendly mode of transportation, are gradually becoming the focus of attention of countries around the world. At present, electric vehicle technology is constantly improving, and problems such as cruising range and charging facilities have been gradually solved, and market demand is gradually growing. Driven by policy support and technological innovation, the electric vehicle industry has become an important development direction of the global automotive industry. Governments of various

countries have introduced encouraging policies to increase the research and development and promotion of electric vehicles. Among them, the battery pack is the core component of electric vehicles. It provides power for electric vehicles and accounts for 30% to 40% of the cost of the whole vehicle. The battery pack mainly includes enclosure mechanical structural parts, battery modules, and battery management systems. The enclosure mechanical structural parts include upper covers and enclosures. Battery Enclosure is an important part of the battery pack, which has an important impact on the performance, safety and life of the battery pack. The enclosure under the battery pack of electric vehicles refers to the shell installed at the bottom of the battery pack, which is used to support, fix and protect the battery modules, battery management systems and other components inside the battery pack. The main electric vehicle power Battery Enclosures on the market include aluminum alloy enclosures, sheet metal stamping enclosures, and steel Roll-formed Steel Battery Enclosures. Enclosures are mainly composed of aluminum alloy profile frames and aluminum alloy profile bottom plates, and the frames and bottom plates are aluminum alloy extruded profiles. Sheet metal stamping enclosures are stamped and formed by sheet metal in one piece, with crossbeams and longitudinal beams welded in a crisscross pattern in the middle. Sheet metal forming parts play a sealing role, and crossbeams and longitudinal beams play a structural support role. Roll-formed Steel Battery Enclosures are similar to sheet metal stamping enclosures, with steel roll-formed profile frames, steel panels on the bottom, and crossbeams and longitudinal beams welded in the middle. In terms of structural strength, steel Roll-formed Steel Battery Enclosures have the highest strength, followed by aluminum alloy enclosures, and sheet metal stamping enclosures have the lowest strength. Therefore, sheet metal stamping enclosures are used for battery packs that are lighter in weight and smaller in size. In terms of manufacturing cost, aluminum alloy enclosure has the highest cost due to the high cost of aluminum materials. The cost of steel rolled Battery Enclosure and sheet metal stamping enclosure is similar, but sheet metal stamping enclosure requires molds of different specifications for different models, and the mold cost is high. Steel rolled Battery Enclosure only needs to open the mold once, and can be transformed into enclosures of different models and sizes by adjusting the length and width of the rolled profile. According to our data, the global shipment of Roll-formed Steel Battery Enclosure will be about 1.146 million units in 2024, and will reach 8.921 million units in 2031, with a compound annual growth rate of more than 30% during the test period. China occupies the largest downstream market, with a market share of more than 75% in 2024. Major global manufacturers include Suzhou Yichuangte Intelligent Manufacturing, Lucky Harvest, Magna International, Changzhou Hugestone New Energy Technologies, Liuzhou Aode Yongxing Automotive Parts Technology, Forvia, Voestalpine Metal Forming GmbH, Suzhou Prysler Advanced Forming Technology,

Ningbo Huaxiang Electronic, XD Thermal, Lingyun Industrial Corporation, Nabaichuan Holding, etc. In 2024, the global TOP5 market share will exceed 60%. In terms of product types, it is mainly divided into different high-strength steel products such as DP980 and DP1180, among which DP980 products occupy the main market share. As an important component of electric vehicle power batteries, the unique process and design of Roll-formed Steel Battery Enclosure bring many significant advantages. First of all, compared with traditional aluminum alloy Enclosure, the cost of parts of Roll-formed Steel Battery Enclosure can be reduced by more than 30%. Through the thin-wall design of high-strength steel materials, it not only maintains lightweight but also enhances structural strength. Secondly, Roll-formed Steel Battery Enclosure uses ultra-high-strength steel materials (such as 980DP, 1180DP), and its tensile strength is as high as 1500MPa or more, which can more effectively protect the battery system from external impact. In addition, Roll-formed technology adopts a multi-roller structure, and its production efficiency is more than 10% higher than that of traditional stamping, which is suitable for mass production. Moreover, Roll-formed is suitable for processing parts with complex shapes, which provides more possibilities for the innovative design of Battery Enclosure. In general, Roll-formed Steel Battery Enclosure has broad application prospects in the mid- and low-end vehicle market due to its advantages of low cost, high strength, high production efficiency, light weight and environmental protection. We believe that Roll-formed Steel Battery Enclosure will soon become a key solution that various car companies and battery pack manufacturers will compete to research and develop.

The global Roll-formed Steel ?Battery Enclosure market size was estimated at USD 147.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 29.50% during the forecast period.
