Abstracts

Roll grinders are power grinding tools or machine tools used in the grinding process. Grinding is a common method of processing using an abrasive wheel or wheel as a cutting tool. Roll grinding is the main feature. Some roll grinders can do a lot of grinding tasks including some simple milling tasks. Roll grinder for the highest efficiency and precision. Roll grinders with a travelling table, table-top machines or a complete machining center with an integrated loader – machines guarantee that your rolls meet the highest demands. Global roll grinder includes Tenova, ANDRITZ, etc. Global top 3 companies hold a share over 40%. Europe is the largest market, with a share about 50%, followed by China and Japan with the share about 25% and 15%. In terms of product, wheel-traverse type is the largest segment, with a share over 50%. And in terms of application, the largest application is steel industry, with a share about 40%. As an important equipment for steel rolling, the market of roll grinder has a certain correlation with the steel market. As a very important metal material, steel is mostly used to produce steel bars, industrial pipes, agricultural machinery, mining equipment, etc., and is widely used in energy, construction, machinery manufacturing, transportation, home appliances and other fields. The roll grinder market has maintained a growth trend with the development of heavy industries such as steel, aluminum, and papermaking. Roll grinders are key equipment for manufacturing and repairing the surface accuracy and performance of rolls. They are widely used in metallurgy, steel, aluminum, papermaking and other fields to ensure the surface finish and dimensional accuracy of rolls during production. Modern roll grinders use CNC technology and automated control systems to provide high-precision, automated, and continuous grinding operations. The application of these automated technologies has greatly improved production efficiency and product quality while reducing manual intervention and operating costs. With the rise in global energy costs and the tightening of environmental regulations, companies are increasingly demanding energy-saving and efficient grinders, and the market is

gradually leaning towards high-efficiency, low-energy equipment. Many old equipment has decreased in accuracy and efficiency, leading to the need for companies to update and upgrade their equipment. The new generation of roll grinders meets the needs of modern production lines with higher accuracy and automation levels.

The global Roll Grinders (Roll Grinding Machine) market size was estimated at USD 512.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 2.30% during the forecast period.
