Abstracts

Roll roofing is a type of roofing material that comes in long rolls and is commonly used for covering flat or low - slope roofs. It is a popular choice due to its relatively low cost, ease of installation, and decent weather - resistant properties. The most common type is asphalt roll roofing, which consists of a base material, such as fiberglass or organic felt, impregnated with asphalt. This provides a basic level of protection against rain, snow, and sunlight. There are also other variations like modified bitumen roll roofing, which offers enhanced durability and flexibility thanks to the addition of rubber or plastic modifiers. Mineral - surfaced roll roofing has a layer of granules or mineral particles on the surface, improving its resistance to UV rays and adding aesthetic appeal. Self - adhering roll roofing, or peel - and - stick roofing, is convenient as it can be easily applied by peeling off a protective film and sticking it onto the roof surface. Overall, roll roofing is a practical option for many roofing projects, especially those on a budget or where a simple and efficient roofing solution is required.

The global Roll Roofing market size was estimated at USD 816.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
